PREFACE

- This presentation is a brief overview of the Getty vocabularies, AAT, TGN, ULAN, CONA and IA.

- For full discussions of the Getty vocabularies, see the vocabulary Web pages, Editorial Manuals, and other presentations on the vocabulary training page.

For basic information on vocabularies, see *Introduction to Controlled Vocabularies* (Harpring, Baca editor, revised 2013) and its bibliography

- Translated in Portuguese

# Getty Vocabularies

## Enabling digital art history

<table>
<thead>
<tr>
<th>Vocabulary Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Art &amp; Architecture Thesaurus</strong></td>
<td>Includes generic terms, relationships, sources, and notes for work types, roles, materials, styles, cultures, and techniques (e.g., amphora, oil paint, olieverf, peintures à l’huile, acetolysis, 玉器, Jadekünste, sintering, orthographic drawings, Olmeca, Rinascimento, Buddhism, watercolors, asa-no-ha-toji)</td>
</tr>
<tr>
<td><strong>Getty Thesaurus of Geographic Names</strong></td>
<td>Includes names, relationships, and coordinates for current and historical cities, nations, empires, archaeological sites, lost settlements, and physical features; through LOD, TGN may be linked to GIS and maps (e.g., Diospolis, Acalán, Ottoman Empire, Mogao, Ch’ien-fu-tung, Ganges River, गंगा नदी)</td>
</tr>
<tr>
<td><strong>Union List of Artist Names</strong></td>
<td>Includes names, relationships, notes, sources, and biographical information for artists, architects, firms, studios, repositories, patrons, sitters, and other individuals and corporate bodies, both named and anonymous (e.g., Mark Rothko, Cai Xiang,葵襄, Crevoile Master, Altobelli &amp; Molins, Rajaraja Museum)</td>
</tr>
<tr>
<td><strong>Cultural Objects Name Authority</strong></td>
<td>Is a new resource linking rich metadata such as title, artist attribution, patron, materials, and location for works of art, architecture, and other cultural works, to allow a conduit for research and discovery (e.g., Mona Lisa, Livre de la Chasse, Chayasomesvara Temple, Hagia Sofia, Αγία Σοφία, Le déjeuner sur l’herbe)</td>
</tr>
<tr>
<td><strong>Getty Iconography Authority</strong></td>
<td>Is a new resource that includes proper names, relationships, and dates for iconographical narratives, religious or fictional characters, historical events, names of literary works and performing art (e.g., Adoration of the Magi, Flood of Deucalion, French Revolution, Xibalba, Niflheim, शिव, Shiva, Bouddha couché)</td>
</tr>

What are the Getty vocabularies?

- The Getty Vocabularies contain structured terminology for art, architecture, decorative arts, archival materials, visual surrogates, conservation, and bibliographic materials.
- Compliant with international standards, they provide authoritative information for catalogers, researchers, and data providers.
- The Getty Vocabularies strive to be ever more multilingual, multi-cultural, and inclusive. The vocabularies grow through contributions from institutions and projects comprising the expert user community.
- In the new linked, open environments, the Getty Vocabularies may provide a powerful conduit for research and discovery for digital art history.
What are the Getty vocabularies?

- The Getty vocabularies represent over 35 years of continuing international collaborative scholarship.
- From their inception, the Getty vocabularies were designed to be linkable to each other and to the broader realm of cultural heritage information. For example, in the AAT, concepts are linked to each other through hierarchical and associative relationships.
- With the release of the Getty Vocabularies as Linked Open Data (LOD) a few years ago, the Getty became a leader in advancing the possibilities of technology to enable research and discovery of information about art, architecture, conservation, and other cultural heritage.
- The Getty vocabularies are entering a new world of seemingly limitless possibilities in digital scholarship.
What are the Getty vocabularies?

- Target audience: The primary user communities and target audience of the Getty vocabularies include researchers in art and architecture, art libraries, archives, visual resource collection catalogers, museums, special collections, other repositories of cultural heritage information, conservation specialists, archaeological projects, bibliographic indexing projects, and the information specialists who attend to the needs of these users. In addition, a significant number of users of the Getty vocabularies are students or members of the general public.

- How the vocabularies are constructed: The AAT, ULAN, TGN, IA, and CONA are compiled resources that grow primarily through contributions from the expert user community, including large-scale international translation projects.
Our History: AHIP
The Getty Vocabularies

Catalog, index, document, access, research, discover

- AHIP = trailblazer in
  a) committing resources to standards and vocabularies for art information
  b) bringing together disparate communities under Getty leadership
- Resources envisioned to ask complex art historical questions
- Active in ISO and NISO
- Vocab data model = thesaurus and other links
- Vocab working model = contributions from expert user community coordinated by a central editorial and tech team
- Target users = scholars, researchers, visual resources, photo archives, art libraries, special collections, archives, museums, conservation

Partial group of AHIP staff at new Getty Center
Our History: AHIP
The Getty Vocabularies

- **AAT** = late 1970s: architectural historians, visual resources professionals, art literature indexing projects; Toni Petersen, Dora Crouch, and Pat Molholt; began with terms from LOC and local word lists; steering committee - Williams College, Clark Art Institute
- Data creation by panel of architectural historians, spearheaded by Hank Millon, CASVA, National Gallery of Art, Washington
- Getty joined in 1983, participant in discussion, financed effort, provided technology; AAT moved to Los Angeles in 1990, joined Getty Vocabulary Program; combined editorial rules and adopted same core data structure as ULAN and TGN
- First contributions = paper forms, entered by hand, 1000s; books → disks, OUP; Several custom-made editorial systems: merging duplicates, editing, hierarchies, publishing; Now = XML contribution formats, publish in various formats, LOD
- Hundreds of expert contributing institutions, ongoing translations
Origins and development of the Getty Vocabularies

Thanks to the visionaries committed to art information access for research and cataloging

- ULAN and TGN = based on CIHA TAU models
- Thesaurus Artis Universalis committees met in Europe in 1980s, authorities for people/places for art history
- ULAN, in 1984 compiled from artist files of Getty Trust’s automated documentation projects
- Photo Archive, Provenance Index, BHA, JPGM, Witt projects at Courtauld London, Census for Antique Art, Avery Index, Foundation for Documents of Architecture, others
- Leaders: Eleanor Fink (later director of AHIP), Jim Bower, Murtha Baca, Patricia Harpring
- Army of grad students with miles of printouts, duplicates to merge and otherwise clean data
- Broader contribution program was initiated, now have 100s of institutional contributors
- ULAN and TGN = in sync with authorities in Categories for the Description of Works of Art (CDWA); = consensus of best practice from broad coalition of scholars, museums, archives, visual resources, others
- ULAN was published in hardcopy books and on disks
- Soon AAT and ULAN were too large for book format, published only in automated formats
Origins and development of the Getty Vocabularies

Thanks to the visionaries committed to art information access for research and cataloging

- TGN began in 1987, was called TAP, *Thesaurus of Art Historical Place Names*
- Based on *Thesaurus Artis Universalis* (TAU)
- Further advised by participants in colloquium at Getty in 1991, spectrum of potential expert users of geographic vocabulary in cataloging art and scholarship; Hank Millon from CASVA was key voice
- Leaders: Eleanor Fink, Jim Bower, Murtha Baca, Patricia Harpring
- Needed a skeleton of modern world on which to build historical data; bought and loaded data from atlas publisher, but ran into legal issues; we started over
- Now TGN uses U.S. government databases, USGS and NGA/NIMA, for the skeleton of the modern world
- In 1987, also added 1000s of geographic names in use by various Getty projects (as we continue to add historical names and other information today)
- Again relied upon an army of grad students to build hierarchies and edit data
- TGN debuted online when Getty Center opened in 1997

- TGN grows through contributions and updating from U.S. gov’t sites
- TGN is a Thesaurus → with LOD, may be linked to GIS and to maps
Origins and development of the Getty Vocabularies

Thanks to the visionaries committed to art information access for research and cataloging

- CONA planning began in 2004, as a resource comprising unique numeric identifiers and brief records for art and architecture, extant or destroyed, particularly focused on variations of title; based on CDWA/CCO model with links to other Getty vocab and outside resources, including repository records, if such data is discoverable
- IA is based on the Subject Authority of CDWA/CCO; no other global resource is available for indexing proper-name subject content; links to existing standards where possible (e.g., LOC and Iconclass)
- Impetus from Vocab user community, especially VR community and bibliographic projects; in concert with Cataloging Cultural Objects (CCO) advisory committee, users needed authorities for art works depicted in their visual surrogates, and a resource for global iconography depicted
- CDWA/CCO models represented best practice as agreed upon by diverse communities representing the Getty vocabularies’ target users

Addendum:
- In addition to producing and disseminating vocabularies, the Getty Vocabulary Program has from the beginning been involved in training
- Workshops other forums to train users how index with Getty vocabularies and how to contribute
- Editorial guidelines and other training are online, Intro to Controlled Vocab
Context for the Getty Vocabularies

AAT      TGN      ULAN      CONA      IA
What Are Controlled Vocabularies?

- A controlled vocabulary is an organized arrangement of words and phrases
- Typically includes preferred and variant terms
- Has a defined scope or describes a specific domain

Purpose of Controlled Vocabularies

- To provide terminology to catalog and retrieve information
  - To capture the richness of variant terms
  - For some users, to promote consistency in assignment of the same terms to similar content
  - In retrieval, to utilize variants and broader/narrower contexts
Controlled Vocabularies vs. Controlled Format

- **Controlled vocabularies** are organized sets of controlled terminology values (often with other information as well)
- **Controlled format** refers to rules concerning the allowable data types and formatting of information

- Fields may have controlled format in addition to being linked to controlled vocabulary
- Or the controlled format may exist in the absence of any finite controlled list of acceptable values
Controlled Vocabularies vs. Controlled Format

Controlled format

- May govern the expression of Unicode or other characters in either a free-text field or in a field that is linked to a controlled vocabulary

- Also for fields where numbers or codes are used

- E.g., recording measurements, geographic coordinates
- May regulate the number of digits allowed, the expression of decimals and negative numbers, etc.,
- *Ideally in compliance with ISO, NISO, or another appropriate standard*
### Controlled Vocabularies vs. Controlled Format

**Which fields here are controlled format, which use controlled vocabulary?**

### Types of Controlled Vocabularies

- Most controlled vocabularies in art indexing are structured vocabularies
- Structured vocabulary = emphasizes relationships

### Relationships in General

- Connections between terms and between concepts
  
  Are a *rose window* and a *Catherine wheel* the same thing?  
  How is *pot-metal glass* related to the more general term *stained glass*?

- Between *equivalents* (synonyms)

- Other relationships = *hierarchical* and *associative* (links that organize concepts and provide context)
The most common types of controlled vocabularies used for art and architecture information

- subject heading lists
- simple controlled lists
- synonym ring lists
- taxonomies
- thesauri
Subject Heading Lists

Uniform words or phrases intended to be assigned to books, articles, or other documents in order to describe the subject or topic of the texts and to group them with texts having similar subjects

Examples:

**Library of Congress Subject Headings (LCSH)**

*Bicycle racing--United States*

**Medical Subject Headings (MeSH)**

Embryonic and Fetal Development

• Typically arranged in alphabetical order, with cross-references between the preferred and other nonpreferred headings

• Differ from other vocabularies = precoordination of terminology = combine several unique concepts together in a string
Other Headings

- Other types of headings or labels may be used to uniquely identify or disambiguate one vocabulary entry from another.

  - E.g., name of a creator may be listed with a short biographical string to form a heading or label for display in a work record.

 **Pierre Koenig (American architect, 1925-2004)**

  - name
  - display biography
Label: Case Study House No. 21 (house; architect: Pierre Koenig (American architect, 1925-2004); 1956-1958; renovated 1998)

Examples of headings in object record

Controlled Lists

A controlled list is a simple list of terms used to control terminology

A well-constructed controlled list, the following is true:

- each term is unique
- terms are not overlapping in meaning
- terms are all members of the same class (i.e., having the same level of rank in a classification system)
- terms are equal in granularity or specificity
- terms are arranged alphabetically or in another logical order

- Should be derived from larger published standard vocabularies if appropriate

- They are best employed in certain fields of a database where a short list of values is appropriate and where terms are unlikely to have synonyms or ancillary information
Controlled Lists

**Pick Lists**

Lead users to a small set of choices of terms for a given field

Often implemented as drop-down or other types of lists

• From the end-user perspective, such short lists may be easier to navigate than more complex lists, particularly for nonspecialist users
Controlled Lists

**Pick Lists**

In cataloging systems, advantage of such lists = cataloger or indexer has only short list of terms from which to choose

Thus ensuring more consistency and reducing the likelihood of error

Example of a pick list from The Museum System (TMS) application for the J. Paul Getty Museum

<table>
<thead>
<tr>

<td>implements</td>
<td>texts</td>
</tr>
<tr>
<td>jewelry</td>
<td>vessels</td>
</tr>
</tbody>
</table>
Controlled Lists

Pick Lists

In cataloging systems, advantage of such lists = cataloger or indexer has only short list of terms from which to choose

Thus ensuring more consistency and reducing the likelihood of error

- Dozens of areas of a work record may be better suited for a short controlled list rather than a more complex controlled vocabulary

  Classification field, Title Type (e.g., artist’s, descriptive, inscribed, etc.), Title Language (e.g., English, French, German, Italian, Spanish, etc.), or Title Preference (e.g., preferred, alternate)

- Disadvantage is that it limits choices to cataloger or end-user; if used in retrieval would not allow retrieval by synonyms and related terms
Synonym Ring Lists

• Simple sets of terms considered equivalent for the purpose of retrieval

• Catalogers do not use synonym rings for indexing; used behind the scenes of an electronic information system

• Used to broaden retrieval (query expansion): may contain near-synonyms that have similar or related meanings rather than only terms with true synonymy

• Used with texts, not generally with fielded data

• Best when constructed by an expert in the content and for a specific text
Authority Files

Sets of established names or headings and cross-references to the preferred form from variant or alternate forms

- Authority control refers as much to the methodology of application as to a particular controlled vocabulary

- Any listing of terms, names, or headings that distinguishes between a preferred and variant names or headings may be used as an authority

- Getty vocabularies are non-authoritarian authorities; preferred term is flagged (term used most often in scholarly literature in language of the record) but users may use any term in the record if they wish
Taxonomies

A taxonomy = orderly classification for a defined domain
Comprises controlled vocabulary terms organized into a hierarchical structure

- A taxonomy may differ from a thesaurus in that it generally has shallower hierarchies and a less complicated structure

- For example, it often has no equivalent (synonyms or variant terms) or related terms (associative relationships)

- Scientific classifications of animals and plants are well-known examples of taxonomies
Alphanumeric Classification Schemes

Controlled codes (letters or numbers, or both letters and numbers) that represent concepts or headings

- Generally have an implied taxonomy that can be surmised from the codes

Dewey Decimal Classification and Library of Congress Classification systems
Ontologies

Formal, machine-readable specifications of a conceptual model

Not a controlled vocabulary, but use one or more controlled vocabularies and expresses the vocabulary in a representative language to express relationships

- Ontologies generally divide the realm of knowledge that they represent into the following areas: individuals, classes, attributes, relations, and events
- Ontologies used in the Semantic Web, artificial intelligence, software engineering, and information architecture

A detail of a sample ontology for Vincent van Gogh's *Iris* and Henri Matisse's *Still Life*, illustrating how the works are part of a subset of oil paintings under the category paintings

[Diagram showing the ontology structure with nodes for paintings, watercolors, oil paintings, Irises, Vincent van Gogh (Dutch, 1853-1890); 1889; oil on canvas; J. Paul Getty Museum (Los Angeles, California, United States), 90.PA.20, and Still Life, Henri Matisse (French, 1869-1954); ca. 1905; oil on cardboard on wood; National Gallery of Art (Washington, DC, United States), 1970.17.40]
Folksonomies

Assemblages of concepts represented by terms and names (called tags) that are compiled through social tagging; became prominent ca. 2004

Do not typically have hierarchical structure or preferred terms for concepts, and they may not even cluster synonyms

Not considered authoritative because they are typically not compiled by experts

- Can be useful in situations where controlled tagging is not possible
- Potential for enhanced retrieval = by linking folksonomies to more rigorously structured controlled vocabularies
Thesauri

- Thesaurus: A semantic network of unique concepts
- Thesauri may be monolingual or multilingual
- Thesauri may have the following three relationships:
  - Equivalence Relationships
  - Hierarchical Relationships
  - Associative Relationships
Using Multiple Vocabularies

Catalogers of art information require multiple vocabularies because no single vocabulary provides the full set of terminology needed to catalog or index a given set of cultural heritage data.

- A combination of vocabularies is necessary for indexing.
- A separate combination may be necessary for retrieval (or at minimum the cataloging vocabularies may be used differently in retrieval).
Scope and Content of the Getty Vocabularies

AAT    TGN    ULAN    CONA    IA
AAT, the Art & Architecture Thesaurus®

The AAT is a thesaurus containing generic terms, dates, relationships, sources, and notes for work types, roles, materials, styles, cultures, techniques, and other concepts related to art, architecture, conservation, other cultural heritage.

- Generic terms, not proper names
  - oil paint, olieverf, acetalosis, sintering, orthographic drawings, Olmeca, Rinascimento, Buddhism, watercolors, asa-no-ha-toji, sralais
- AAT is multilingual; large translation projects are underway
- Conceptually organized from terms to describe abstract concepts to generic terms for concrete, physical artifacts
- Facets are the upper levels of the AAT structure
- AAT is not organized by subject matter or discipline
Sample record

- suō xīn léi sì (C, U, Chinese (transliterated Pinyin), P, D, U, PN)
- so hsin lei ssi (C, U, Chinese (transliterated Wade-Giles), P, D, U, U)
- dentelle aux fuseaux (C, U, French-P, D, U, PN)
- merletto a tombolo (C, U, Italian-P, D, U, PN)
- encaje de bolillos (C, U, Spanish-P, D, U, PN)
- encaje de bolillo (C, U, Spanish, AD, U, SN)
- Klöppelspitze (C, U, German, AD, U, SN)
- Klöppelspitzen (C, U, German-P, D, U, PN)
Thesaural structure

- Sub-facets (called “hierarchies”) establish the context of the term
- Guide terms in angled brackets

**Work type:** carte-de-visite
Indexers may choose the term that best describes the work.
- The concept and each term are identified by unique numeric IDs.
- E.g., singular for a single item, language.
- Some systems or local cataloging rules do not allow linking at the term level.

**Work type:** carte-de-visite

ULAN, the Union List of Artist Names®

ULAN contains names, relationships, notes, sources, and biographical information for artists, architects, firms, studios, repositories, patrons, sitters, and other individuals and corporate bodies, both named and anonymous.

- Named people and corporate bodies
  
  Bartolo di Fredi, Xueshi Bai, 白雪石, National Palace Museum (Taipei)

- Anonymous creators known by appellation: Santa Eufemia Master

- Scope also includes “Non-Artists” (e.g., sitters and patrons)

- “Unknown People by Culture” (e.g., unknown Aztec)

- “Unidentified Named People” (e.g., known from archival documents)

- ULAN includes current and historical associative relationships (e.g., students to teachers; firm and studios to members)

- Contributions to ULAN are from experts at authorized institutions (e.g., museums, special collections, art libraries, cataloging projects, bibliographic projects, etc.)
ULAN, the Union List of Artist Names®

TGN, the Getty Thesaurus of Geographic Names®

TGN focuses on places relevant to art, architecture, and related disciplines, recording names, relationships, place types, dates, notes, and coordinates for current and historical cities, nations, empires, archaeological sites, lost settlements, and physical features.

- Places relevant to art history
  - Thebes, Diospolis, Ottoman Empire, Mogao Caves, Ch’ien-fu-tung, Ganges
- TGN is a structured vocabulary
- TGN is a thesaurus compliant with ISO standards
- Focus on historical regions, archaeological sites, lost settlements, built upon a skeleton of the modern world from NGA/NIMA and USGS data sets
- TGN is not GIS, is a thesaurus focused on names and links. Why invent the wheel over again? Many sources of geographic data exist. However, TGN may be linked to GIS, maps, and other geographic resources.
TGN, the Getty Thesaurus of Geographic Names®

IA, the Getty Iconography Authority™

IA is a thesaurus that covers topics relevant to art, architecture, and related disciplines; includes multilingual proper names, relationships, and dates for iconographical narratives, religious or fictional characters, themes, historical events, and named literary works and performing arts.

- Includes the proper names of subjects not covered by other Getty Vocabularies
- Scope is multicultural and multilingual, grows through contributions
- Includes links to other sources where there is overlap, such as Iconclass and US Library of Congress subject authorities
- The IA is compliant with the Subject Authority of CDWA and CCO (Categories for the description of Works of Art and Cataloging Cultural Objects)
- The IA has a thesaural structure; it includes equivalence, associative, and hierarchical relationships
- The IA is linked to the other Getty Vocabularies

CONA, the Cultural Objects Name Authority®

CONA compiles titles/names and other metadata for works of art, architecture, and other cultural works, current and historical, documented as items or in groups, whether works are extant, destroyed, or never built.

- In development, may be used to record works depicted in visual surrogates and for other purposes.
- CONA compiles titles, attributions, depicted subjects, and other metadata about works of art, architecture, and cultural heritage, both extant and historical works, works never built, disassembled works, conceptual works for multiples. *Hagia Sophia, Mona Lisa, Thirty-six Views of Mount Fuji, 富嶽三十六景*
- Scope is multicultural and multilingual; grows through contributions.
- CONA is linked to images; CONA is linked to the AAT, TGN, ULAN, and IA.
- Through this rich metadata and links, CONA may provide a powerful conduit for research and discovery for digital art history.
The Simplified entity-relationship diagram for CONA is the same as CDWA / CCO

Surrogate in Photo Archive

Enough information in surrogate records to make minimal record for work depicted
Processing records

• Contributors’ data is loaded and processed by the Getty Digital team and the Getty Vocabulary Program
• Data is merged, normalized, and published
• Exported data is refreshed for users every month
• Releases: Online search, Web services APIs, LOD, XML, and relational tables

At any time, could be 100s of thousands of candidate records, contributed but still in process

Editors have monthly quotas for work done

to allow anticipation of time frame for publications
to ensure not too much time is spent on unsolvable tasks
The **International Terminology Working Group (ITWG)**—a collective of metadata and controlled vocabulary professionals and scholars from North America, Europe, Asia, and the Middle East—meet every year or so to discuss four AAT translation Projects (including the Dutch AAT), as well as new projects, the other vocabularies, and overall the challenges and opportunities in developing and maintaining multilingual electronic thesauri for use by cultural heritage institutions.

---

**What do we do?**

**Coordinating contributions**

- Nurturing relationships with contributors
- Advising re. mapping their existing data to format for loading into our editorial system
  
  E.g., Szémann finding aids to ULAN
- Advising re. translation methodology and content issues
- Meetings and online conversations

---

Patricia Harpring © 2019 J. Paul Getty Trust. For educational purposes. Images may be subject to additional copyright.
### Merging data in one record

- Getty vocabularies merge contributed records representing the same concept.
- Example from ULAN: Three contributions; are any of these records for the same person?
  Yes, 1st and 3rd rows
- Merged by algorithm, if possible; if not, merged by editors

Getty Vocabularies and LOD

AAT  TGN  ULAN  CONA  IA
How are vocabularies used?

- Traditional use of vocabularies for retrieval focuses on the names
- If a user asks for one name/term, all of the synonyms can be used for retrieval
- For example, if a user searches on “Giovanni da Bologna”...

“giambologna” OR “giovanni da bologna” OR “giovanni bologna” OR “jean boulogne” OR “bologna, giovanni da”

From ULAN
- Giambologna
- Giovanni da Bologna
- Giovanni Bologna
- Jean Boulogne
- Jean de Boulogne
- Bologna, Giovanni da

Giambologna
Female Figure
Marble; H: 48 in.; 2008 J. Paul Getty Museum; 82.SA.37

Giovanni Bologna
Triton, 16th century (1560–70);
Bronze; H: 36 in.; Metropolitan Museum of Art; Bequest of Benjamin Altman, 1913 (14.40.689)

Jean Boulogne
Mercur
Volant, Bronze;
H 1.7 m, L 0.57 m, Pr 1.4 m, Musee du Louvre, Collection du duc de Brissac (saisie en 1794)?, MR

Bologna, Giovanni da
Christ Crucified, probably before 1588; bronze, corpus, height 91.5 cm; Metropolitan Museum of Art; Bequest of Mrs. John M. Hay, 1935 (35.67.3)

Female Figure.

Nude, holding apple; bronze; height 1 meter; Modern style; Metropolitan Museum of Art; Bequest of Mrs. John M. Hay, 1935 (35.67.3)
How are vocabularies used? • New methods and LOD can incorporate hierarchical and associative relationships, and other links or inferred relationships to answer more complex questions and aid serendipitous discovery.

**Associative relationships**

**Giambologna** *(Flemish sculptor and architect, 1529-1608, active in Italy)*

**Marie de Medici** *(French queen, patron, 1573-1642)*

**Tacca, Pietro** *(Italian sculptor and architect, 1577-1640)*

- **Tacco, Pietro** had patron **Marie de Medici**
- **Giambologna** was teacher of **Tacca, Pietro**

**Display Date:** from 1592
**Start Date:** 1592 **End Date:** 1608

What is Linked Open Data (LOD)?

- The AAT, TGN, and ULAN are now available as LOD
- They are published under the Open Data Commons Attribution License (ODC-By) 1.0

- When data is linked and open, it means that data is structured and published according to the principles of Linked Data, so that it can be both interlinked and made openly accessible and shareable on the Semantic Web. The goal of linked open data is to allow data from different resources to be interconnected and queried.

- In order for data to be understood and processed automatically by computers, data in records or about resources must be expressed in a standard format. Each thing (for example, a museum object, a place, or a person) must be represented by a persistent identifier (known as a Uniform Resource Identifier (URI)). A Resource Description Framework (RDF) is a language or format for describing things as well as the relationships between things as simple properties and values (known as 'triples'), while things are represented using URIs.

What Are CDWA and CCO?

CONA is compliant with CDWA and CCO
What is CDWA?

Categories for the Description of Works of Art

- CDWA includes both a **conceptual framework** of elements and relationships, and cataloging **rules** for describing, documenting, and cataloging cultural works and related images
- Includes 540 elements
- Agreed upon best practice based on consensus of expert group who met for years
- **Primary focus** is art and architecture, including but not limited to prints, manuscripts, paintings, sculpture, photographs, built works, and other visual media
- Also covers many other types of cultural objects, including artifacts and functional objects from the realm of material culture

CONA is based on CDWA
• For the Work
• For Images of the Work
• Authorities

• Comprehensive set of 540 elements
• 9 core elements

http://www.getty.edu/research/publications/electronic_publications/cdwa/
What is CCO?

Cataloging Cultural Objects

- Subset of CDWA
- Manual for describing, documenting, and cataloging cultural works and their visual surrogates
- Primary focus is art and architecture, including but not limited to prints, manuscripts, paintings, sculpture, photographs, built works, and other visual media
- Also covers many other types of cultural objects, including artifacts and functional objects from the realm of material culture

Published by the American Library Association
Available at the ALA site, Amazon.com, etc.
# What is CCO?

- For the Work
- For Images of the Work
- Authorities

- 116 elements total
- 9 core elements

• FDA Guide: Guide to the Description of Architectural Drawings
Common practice and Best practice

- **CCO/CDWA are based on best practice**
- **Both CCO and CWDA are the result of consensus** reached by groups representing a broad spectrum of prominent professionals in the museum, art library, visual resources, special collection, and archives communities.
- Both CCO and CDWA committees agreed on sets of elements and rules for cataloging based on existing common practice in their professions.
- But going further, to advise best practice for documenting cultural heritage works.
- To both **uniquely identify the works** for maintenance by the responsible institution and to researchers.
- And to provide enough additional information to **allow scholarly research and retrieval**.
Key principles of good cataloging

- **What is the focus?** Establish the logical focus of each Record:
  - a single item
  - a work made up of several parts
  - a physical group or collection of works
  - an image of a work

- **Core elements:** Include all of the core required CCO/CDWA elements

- **Cataloging rules:** Follow the CCO/CDWA rules; make and enforce additional local rules to allow effective retrieval, re-purposing, exchange, and linking of information

- **Terminology:** Use published controlled vocabularies, such as the Getty vocabularies. Use local controlled lists as necessary

- **Consistency:** Be consistent in all aspects of entering data and in establishing relationships between entities

- **Metadata standards:** Ensure that your underlying data structure, including relationships, is compliant with (or mappable to) established metadata standards

- **Your system:** As far as is possible, do not allow limitations of a cataloging system to cause distortion of the data
  - E.g., do not put two values into one field due to system limitations. Your system will change in the future; your data should survive migration
